

Embossing

Parchment paper
Embossing tools

Boss

Place the grey stencil onto the boss

Place the parchment paper on next.

Place the clear stencil on top.

Gently rub the embossing pen to and from within the outlines of the part you wish to emboss. Do not press too hard the paper will tear.

Emboss the same part several times for a good better effect.

*First try out the techniques described on a separate sheet of parchment paper to practice embossing (when you apply light pressure you will obtain a light grey to satin white result, and when you apply higher pressure you will obtain a proper white result) in order to achieve shading result. By changing the intensity of the embossing you are able to obtain a difference in nuance in colour.
