

Fantasy Film

Wire
Fantasy film (various colours)

Scissors
Polystyrene block

Cut a piece of wire the length you require.

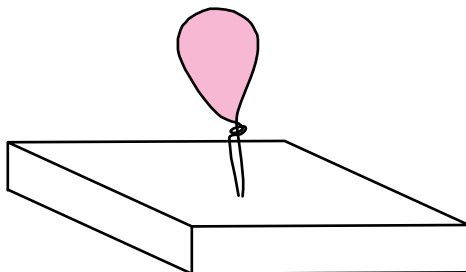

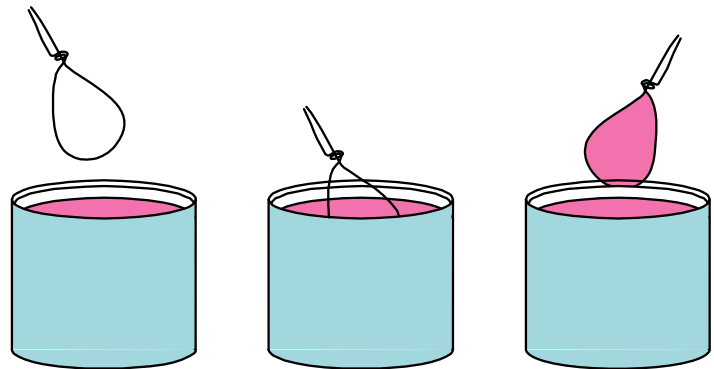

Bend the wire into the shape required and close the shape by giving the wire a few twists.

Leave a tail on the wire so that it can be held when it is dipped.

Make sure that the shape to be dipped is not larger than the opening of the tin.

Dip the shape into the film so that the film covers the shape right up to and including the twist.

Pull out of the film slowly, and hold it over the tin until it stops dripping.

Place the free ends into the polystyrene block to dry.

This should only take a few minutes.

When dry, the film can be twisted and moulded into the shape required.
