

Glass Etching

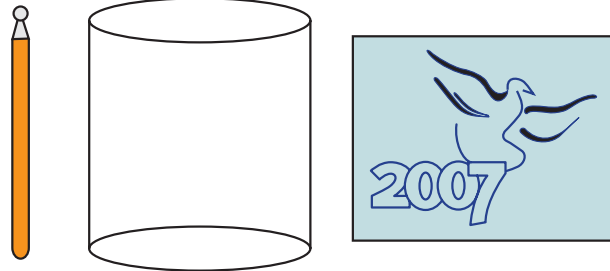

Glass
Design

Etcher
Scissors

Sellotape

You will need a clear smooth glass, a design that will fit the size of the glass and an etching tool.

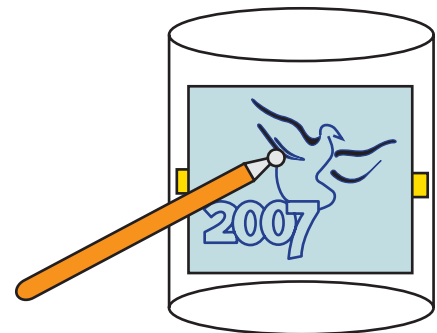

Take the design and secure it in place on the inside of the glass securely, using sellotape either side.

Begin by going around the outline of the design using the etching tool.

To fill in the design, use the etcher like a crayon and keep going over and over the design.

You can either leave the design in place or remove it to fill it in.

If you have not already done so, remove the design from the glass.

REMEMBER

You have been removing minute particles of glass so **you must wash your hands** and **wash the glass** before use.
